

ANTWRP

SUSTAINABILITY

No doubt that sustainability has become part of our everyday decision making process. With ANTWRP we understand that it is our responsibility to take action. We are constantly looking for ways to improve our impact on the planet, the aim is to create a collection that is sustainable to it's core.

All sustainable materials used are certified. Our organic cotton complies with the GOTS (Global Organic Textile Standard) and we use yarns with a GRS-score of 4.0 (Global Recycle Standard) composed of recycle cotton and PET bottles.

Improvement is a constant evolution, therefore we will always ensure that we partner with third parties who use processes and fabrics that help us to be more socially responsible and take care of the environment. To measure this we look at how these organisations are complying with the specifications and guidelines of the ecolabels: OEKO-TEX Standard 100 and the Higg Index. With these certifications we are ensured that textile products are free from substances harmful to health (OEKO-TEX) and we can measure and score the environmental impact of materials used in creating textile products (Higg Index).
